JAVASCRIPT ANIMATIONS — HTML / CSS / JS origin_js

15 JavaScript Added — Scroll Reveal Animation

JS CSS

Scroll Reveal Animation
Elements fade and slide up from 30px (CSS) to default when scroll triggers. Uses IntersectionObserver with threshold: 0.10, rootMargin: '0px 0px -50px' for smooth, performant animation.

```
// Scroll reveal animation
const observer = new IntersectionObserver(function(entries) {
  entries.forEach(function(entry) {
    if (entry.isIntersecting) {
      entry.target.classlist.add('visible');
      observer.unobserve(entry.target);
    }
  });
},{ threshold: 0.10, rootMargin: '0px 0px -50px' });
document.querselectorall('.reveal').forEach(function(el) {
  observer.observe(el);
});
```

16 Auction Countdown Timers

Live countdown timers were added to the Featured Auctions section. Each card's data-ends-in attribute drives a live countdown, updating every second via setInterval('updateCards', 1000).

17 FAQ Accordion Toggle

Single-Open Accordion Behaviour. Only one FAQ item can be open at a time. Clicking a new item closes the previously open item automatically. Clicking an open item closes it.

```
function toggleFAQ(element) {
  // Close all other open items
  document.querselectorall('.faq_item').forEach(function(item) {
    if (item.classlist.contains('open') && item !== element) {
      item.classlist.remove('open');
    }
  });
  // Toggle the clicked item
  element.classlist.toggle('open');
}
```
